YST

YST (You See Through) is a transparent sandwich panel with a honeycomb structure. YST panels are produced on customer demand. The honeycomb structure is covered on both sides with a 1.5mm thick layer of GRP (glass reinforced polyester), Finished with an all weather resistant coating so they are fit for outdoor use.

The result depends on the chosen color of the outside layers and the material of the honeycomb sheet. That sheet can be made of cardboard or aluminum. Aluminum makes it look modern, cardboard gives an organic look and feel.

Available transparent colors are, blue, red, green, yellow, white and black.

YST panels come in three different types:

- ❖ YST standard
- ❖ YST organic
- ❖ YST special

YST standard

The YST standard panel has a uniform honeycomb structure. Depending on the wanted look and feel the cells are made of aluminum or cardboard. The cell size comes in different measures. Most commonly used is 20-25mm. The maximum size of the YST standard panel is 3000 x 1200mm. Thickness is usually 15mm but other dimensions are of course possible

Available transparent colors are, blue, red, green, yellow, white and black. Other colors are considerable when the panels, for example, are meant for one single project.

YST standard is a unique design panel for use in closets, walls or doors, shelves, banisters and furniture for home or office use

YST organic

YST organic has a custom honeycomb structure. The honeycomb is deformed which makes its structure look random. This way a flat panel will look wavy. Because the YST panels are made by hand the customer has a big influence on the final result.

As in the standard panel, also the cell measurements in the YST Organic are variable. A usual size is 20-25mm

The see through polyester sheets are available in the same colors as the standard version. The only difference is the shape of the honeycomb structure.

The maximum size of the YST Organic panel is 3000 x 1000mm. Thickness is usually 15mm but another size is also possible.

YST special

YST special is heavier than YST Standard and Organic. It needs more polyester per square meter which makes it look very exclusively. Also the special is available in more colors. Because of the heavy use of polyester it is only fit for use in relatively small decorative parts like lightning ornaments.

Maximum size is 1000x1000mm, thickness is 10 to 15mm.
